

Maxforce Ant box

Maxforce Ant box contains a viscous bait which is sucked up by the ants and brought back to the nest where the ant queen and larvae are fed with it. The more ants carrying bait back to the nest the better results you'll get. Place the box in a place where most of the ants are moving. The best place to put the box is where you can see the ants entering.

How to use the box:

The box can be activated by ripping of the pegs on the side. Put a small drop of juice next to the box to allow the ants to find it more easily. Place the box in the corner on the floor or where you see ants entering.

Useful Tip: Ants always puts a scent marker so that other ants will find where the sweets are. If you see an anthill/scent marker try and scrub it away, (be persistent as it's the last ant that leaves the place where the sweets are that leaves the scent marker) Try to keep all surfaces clean.

Handling of empty ant boxes:

The boxes must be submitted to the environmental center in your community or any other places where pesticides and other hazardous products can be left for disposal.

Important information:

Always place the box out of reach of children, pets or wildlife. Keep away from food.
If you have residues on your skin, wash with soap and water.
